Déluce LED Recessed Panels

Staff Kitchen - Terminal One

As part of an extensive refurbishment to staff areas within Terminal One, the new Déluce LED recessed panels were used to create a maintenance free, energy saving lighting solution.

The 52W panels are designed to fit within a standard 600mm suspended ceiling frame. Four concealed edge lighting strips ensure uniform illumination. LED lamp life is approximately 50000 hours. They have the added benefit of being able to be banked together on all four sides (fluorescent modular panels can only be banked on three sides).

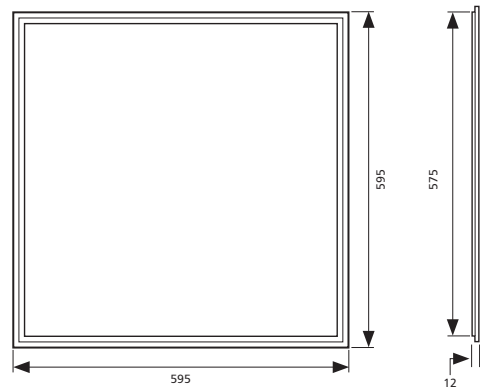

The units are self-extinguishing, conforming to UL94V-0. (To pass UL94V-0, the flame must extinguish within ten seconds, with no glow beyond thirty seconds and no burning material can fall.)

These LED panels are also being fitted in the staff recreational rooms and there are future plans to include them in the pilot rest areas.

DLCR006CW - Cool White

DLCR006WW - Warm White

Note: RGB colour changing versions are also available - ask for details.
